

The evaluation for SDS

You will have to work individually on two projects, each one will consist of two parts:

- implementation (preferably in R, but any other programming language is allowed);
- a written document.

The examination will be oral, based on the presentations of the projects and other questions on topics discussed at the course.

The first project will be evaluated during the semester (in the last week of the semester), and the second one during the summer session.

Each project (the written document + the code) will be checked for similarities using Turnitin.

The deadlines for the projects will be announced later.

Each project will be graded and the average of the two grades will be the final grade.

- if you miss both deadlines, you will be ABSENT in the catalog.
- if you miss only one deadline, you will get the grade 1 for that project.
- to pass the exam, the average (without rounding) should be greater than or equal to 5.
